                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AUTHORS  Center project Information

Center project name: 118187

Center clone name: 216 J 7

Sequenciary sector: plasmid; n/a; 100% of reads

Chemistry: Dye-terminator Big Dye; 100% of reads

Assembly program: Phrap; version 0.960731

Consensus quality: 141319 bases at least Q40

Consensus quality: 141319 bases at least Q40

It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDMA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (22-MAY-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On May 22, 2002 this sequence version replaced gi:20279217.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Eng. ZMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMIBE; Information on the WORMIBE database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. NOTE: This is a 'working draft' sequence. It currently consists of 26 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved

Center project Information
Center project name: HumDraft18
Center clone name: RP11-819X4

Center clone name: RP11-819X4

Sequencing vector: PCR products; 100% of reads
Chemistry: Dye-terminator ET-amersham; 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 152541 bases at least Q40
Consensus quality: 152541 bases at least Q30
Consensus quality: 167578 bases at least Q30
Insert size: 170121; sum-of-contigs
                                                                                                                                                                                                                                   arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

Sequence updated (26-May-2000).

* NOTE: This is a 'working draft' sequence. It currently
consists of 15 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

It currently consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (24-APR-2000) Masahira Hattori, The Institute of Physical and Chemical Research (RIKEN), Genomic Sciences Center (GSC); Kitasato Univ., 1-15-1 Kitasato, Segamihara, Kanagawa 228-855, Japan (E-mail:hattori@gsc.riken.go.jp, URL:http://bgp.gsc.riken.go.jp/, Tel:81-42-778-9923, Fax:81-42-778-9924)

The present sequence is that of oligonucleotide 4, which was used in the construction of a synthetic gene for the production of human uteroglobin (hUG) in bacteria. Oligonucleotides 1-4 (see ABZ58370-73) were used to assemble the coding strand and oligonucleotides 5-8 (see ABZ58374-77) the complementary strand. The gene was assembled by annealing and ligation of the oligonucleotides. Because mature native hUG has glutamic acid at its N-terminus, an initiator methionine was added to the N-terminus, and

Bacterial expression system for producing recombinant human uteroglobin for treating inflammatory and fibrotic conditions, comprises a synthetic gene which codes for human uteroglobin.

The invention relates to a bacterial expression system for the production of recombinant human uteroglobin (rMU), comprising a synthetic gene or human cDNA sequence which codes for human UG, constructed from the oligonucleotides appearing as ADL27626-ADL27629, and which further comprises Met-Ala At the N-terminus of the sequence. Also included are producing an rMUG master cell bank (comprising inoculating a suitable incubating broth with an aliquot portion of a rMUG research seed bank to form a bacterial culture, incubating the bacterial culture, adding a cryopreservative to the bacterial culture to form a cryopreserved solution, transferring a portion of the cryopreserved solution to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the invention, the synthetic gene was cloned into plasmid pCG12 [see ABZ58378] and recombinant hUG (see ABF72259) was produced in Escherichia coli strain CG12. The invention relates generally to the production of recombinant hUG by bacterial expression, protein purification and scaled up production according to current good manufacturing practices. The recombinant hUG is useful for the treatment of inflammatory and fibrotic conditions, such as meonatal respiratory distress syndrome and bronchopulmonary dysplasia. It may also be used to treat conditions associated with elevated phospholipase A2 levels such as pancreatitis,
                                                                                                                                                                                                                                                        Bacterial expression system for production of recombinant human uteroglobin comprising synthetic gene or human cDNA sequence who for human uteroglobin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; ss; recombinant human uteroglobin; rhUG; bacterial expression system; rhUG master cell bank; rhUG research seed bank; anti-inflammatory; secretory phospholipase A 2; fibronectin; respiratory distress; inflammation; fibrotic disease.

Bacterial expression system for producing recombinant human uteroglobin for treating inflammatory and fibrotic conditions, comprises a synthetic gene which codes for human uteroglobin.

Example 1; Page 33; 127pp; English

The present sequence is that of oligonucleotide 5, which was used in the construction of a synthetic gene for the production of human uteroglobin (hUg) in bacteria. Oligonucleotides 1-4 (see ABZ58370-73) were used to assemble the coding strand and oligonucleotides 5-8 (see ABZ58374-77) the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the invention, the synthetic gene was cloned into plasmid pCG12 (see ABZ58378) and recombinant hug (see ABP72259) was produced in Escherichia coli strain CG12. The invention relates generally to the production of recombinant hug by bacterial expression, protein purification and scaled up production according to current good manufacturing practices. The recombinant hug is useful for the treatment of inflammatory and fibrotic conditions, such as neonatal respiratory distress syndrome and bronchopulmonary dysplasia. It may also be used to treat conditions associated with elevated phospholipase A2 levels such as pancreatitis, associated with elevated phospholipase A2 levels such as pancreatitis,
                                                                                                                                                                                                                                                                                                                                                  28-MAY-1997; 97US-00864357.

The invention relates to a bacterial expression system for the production of recombinant human uteroglobin (rhUg), comprising a synthetic gene or human cDNA sequence which codes for human UG, constructed from the oligonucleotides appearing as ADL27626-ADL27629, and which further comprises Met-Ala-Ala at the N-terminus of the sequence. Also included are producing an rhUG master cell bank (comprising inoculating a suitable incubating broth with an aliquot portion of a rhUG research seed bank to

Example 1; SEQ ID NO 5; 64pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC cryopreservative to the bacterial culture to form a cryopreserved consistent transferring a portion of the cryopreserved solution to a cryopresid and storing the cryovial at a temperature below -60 degrees C). CC expressing rhUG (comprising providing a production seed cell bank culture C comprising an expression vector capable of expressing rhUG, inoculating a broth medium with the production seed cell bank culture c inoculum, incubating the bacterial culture formed in step (b). CC inoculum, incubating the bacterial culture formed in step (b) form an cc inoculating a large scale fermenter with the inoculum formed from the step (c) to form affermentation culture, incubating an induction agent to culture within the large scale fermenter, adding an induction agent to the fermentation culture; purifying rhUG, determining the potency of rhUG in a sample, measuring in vitro anti-inflammatory effect arising CC the fermentation or blocking of secretory phospholipase A 2 enzymes by cryUG, measuring in vitro binding of rhUG to fibronectin, determining the curity of rhUG, and a pharmaceutical composition comprising a purified cry producing a rhUG research seed bank or a pharmaceutical grade rhUG distress. The rhUG is useful for treating inflammation and fibrotic diseases. The present sequence is a non-coding strand oligonucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2000US-0220964P
        CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cartivity, and can be used in gene therapy and vaccine production. (I) CC arctivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) CC polymuleotides may be used to produce the secreted (I), by inserting the culeic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polymucleotides may be used to produce the segment. (CC diagnose and treat immune/haematopoietic-related diseases, especially concers and cancer metastases of haematopoietic derived cells. AAK64703 CC to AAK87694 represent human immune/haematopoietic antigen genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            08-NOV-2000;

                                                                                                                                                                                                                                                           CC antino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cantivity, and can be used in gene therapy and vaccine production. (I) creatment of diseases associated with inappropriate (I) expression. For cexample, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome cathet the patients of production of (I) by expression for complete the patients own production of (I). Additionally, (I) concluded the patients own production of (I). Additionally, (I) conclude acids into a host cell and culturing the cell to express the proteins and polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the concers and cancer metastases of haematopoietic-related diseases, especially concers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAX54920 and AAM82169 crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For certainty, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome cc that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of 10. Additionally, (I) cc polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culture the cell to express the cc protein. (I) proteins and polynucleotides may be used to prevent, cancer and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 cc cancers and cancer metastases of haematopoietic antigen genomic concerns the present invention. AAK84942 to AAK84950 and AAM82169 crepresent esquences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated CDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030073623
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for

Vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, inhibit activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 621 BP; 152 A; 162 C; 137 G; 168 T; 0 U; 2 Other;

,

The invention relates to a novel array comprising at least two isolated nucleotide molecules, each molecule having a sequence capable of uniquely hybridising to a nucleic acid molecule which is an expression product of a gene involved in mitochondrial biology. The array comprises two or more isolated nucleic acid molecules or spots, each molecule having a sequence

Array containing probes for genes involved in mitochondrial biology, useful for determining mitochondrial biology gene expression profiles for use in diagnosing pathologies and identifying biochemical pathways.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cc chosen from sequence of 994 human probes and 2046 mouse probles. An array containing is useful for determining an expression profile of a cc mouse or human sample containing nucleic acid, by contacting the array compression profile of a first produce an expression profile. The array is also useful for determining can expression profile of a first labelled sample containing nucleic acid in the sample to the array to produce an expression profile is a reference or a standard. An array is useful for determining an expression profile diagnostic of an energy-metabolism crelated physiological condition. An array of the invention is useful for determining micochondrial biology gene expression profiles of organisms, which are useful for determining expression and closely related species, tissue and organs of conditions, and array is useful for determining micochondrial biology gene expression profiles of organisms, which are useful for determining expression profiles conditions, genes and closely related species, tissue and organs of conditions, genes and creating and/or monitoring biochemical conditions, genes and expression signatures of physiological conditions, conditions, genes and creating and/or monitoring the efficacy of such therapies, and creating and identifying animal models of human censery metabolism-related physiological conditions. An array is also useful for defining expression signatures or profiles for mitochondrial conditions, approached and creating and identifying animal models of human censery metabolism-related physiological conditions. An array is also conditions, and array is also conditions, and array is also conditions, and array is also conditions. An array is also conditions, and creating and identifying animal models of human censery metabolism-related physiological conditions. An array is also conditions, and array is also conditions, and conditions are profiles for mitochondrial businesses, and entergoid and conditions, and array is also conditions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAZ24902) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 95 novel genes and their fragments (nucleic acid sequences: AAZ24811-Z24907; amino acid sequences AAX41308-Y41404) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polynucleotides in a sample or determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 95 polynucleotides, based on which tissues they are most highly expressed in the new polynucleotides. Specific uses are described for each of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   19-MAR-1998;

                                                                                                                                                                                                                                                                                                                                           CC This invention describes novel isolated human genes and the secreted CC proteins they encode. The products of the invention are useful for CC preventing, treating or ameliorating medical conditions, e.g. by protein CC or gene therapy. Also pathological conditions can be diagnosed by CC determining the amount of the new polypotides in a sample or by CC generating the presence of mutations in the new polypotides. CC specific uses are described for each of the 101 polynucleotides, based on CC which tissues they are most highly expressed in, and include developing CC products for the diagnosis or treatment of cancer, tumours, CC neurodegenerative disorders, leukemias, diseases of the immune system, CC deficiencies, bepatic and renal diseases, lymphomas, inflammation, CC allergies, Alzheimer's and cognitive disorders, schizophrenia, prostate CC disease, skeleral or cardiac muscle disorders, pulmonary disorders, CC transplant rejection, disorders involving osteoclasts such as CC infections and AIDS. The human secreted proteins of the invention are represented in AAY07451-X37552
                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Primers generated from rat opioid growth factor receptor (OGFr) cDNA were Cused to clone a fragment of the human OGFr cDNA. The complete sequence of human OGFr was assembled with a combination of 3 and 5 RACE 5 RACE consistently yielded a single species of cDNA, while the 3' RACE revealed extensive alternative splicing. The alternate splice forms were missing the imperfect repeats or differed in the number of imperfect repeats. The human OGFr gene chromosomal location was determined by FISH as 20q13.3. OGFr proteins, nucleic acid molecules, antibodies, transformed cells and cexpression vector are useful for detecting expression or levels of an OGFr in a tissue. OGFr nucleic acids can be used to inhibit growth of cells in vitro. The antisense sequences and antibodies can be used to promote growth of cells in vitro. Cell growth can be promoted by interfering with the OGFr ligand-receptor system, especially where a subject suffers from a tissue wound. Treating cancer comprises enhancing the function of the OGF ligand-receptor system in cancerous cells of a comparison of the oGF ligand-receptor system in cancerous cells of a comparison of the OGF ligand-receptor system in cancerous cells of a comparison of the OGF ligand-receptor system in cancerous cells of a comparison of the OGF ligand-receptor system in cancerous cells of a comparison of the OGF ligand-receptor system in cancerous cells of a comparison of the odf ligand-receptor system in cancerous cells of a comparison of the odf ligand-receptor system in cancerous cells of a comparison of the odf ligand-receptor system in cancerous cells of a comparison of the odf ligand-receptor system in cancerous cells of a comparison of the odf ligand-receptor system in cancerous cells of a comparison of the odf ligand-receptor system in cancerous cells of a comparison of the odf ligand-receptor system in cancerous cells of a comparison of the comp

Also CC claimed are a vector comprising the novel polynucleotide, a host cell CC which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an ucleotide sequence that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates the expression of the polynucleotide sequence the expression of a polynucleotide sequence which is differentially a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound which regulates the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating compound that regulates the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more composition composition comprising the one or more composition comprising the one or more composition composition composition constriction conductes its activity is useful for preparing a medicament for treating composition composition comprising the one or more composition composition composition constriction conducted that sequence presented is a rat DNA (shown in Table 2 of the specification) which encodes one of the polypeptides of the invention constriction is differentially expressed during pain. Note: The sequence data contained that paint of the printed specification, but was fixed the printed specification, but was fixed the printed specification, but was constructed to pain and a pai

                                                                                                                                           CC Primers generated from rat opioid growth factor receptor (OGFr) cDNA were closed to clone a fragment of the human OGFr cDNA. The complete sequence of human OGFr was assembled with a combination of 3 and 5 RACE FC consistently yielded a single species of cDNA, while the 3 RACE revealed extensive alternative splicing. The alternate splice forms were missing the imperfect repeats or differed in the number of imperfect repeats. The location was determined by FISH as 2013.3. CC OGFr proteins, nucleic acid molecules, antibodies, transformed cells and CC expression vector are useful for detecting expression or levels of an CC OGFr in a tissue. OGFr nucleic acids can be used to inhibit growth of cells in vitro. The antisense sequences and antibodies can be used to promote growth of cells in vitro. Cell growth can be promoted by components of the OGF ligand-receptor system, especially where a cc subject suffers from a tissue wound. Treating cancer comprises enhancing the function of the OGF ligand-receptor system in cancerous cells of a patient or administering the OGFr nucleic acid to the patient

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score

```
Sequence 9, Application US/08864357F

Patent No. 6255281

GENERAL INFORMATION:

APPLICANT: Claragen, Inc. & NIH

ITILE OF INVENTION: Use of Recombinant Huma

ITILE OF INVENTION: Fibrotic Conditions

ITILE OF INVENTION NUMBER: US/08/864,357F

CURRENT APPLICATION NUMBER: US/08/864,357F

CURRENT ETLING DATE: 1997-05-28

NUMBER OF SEQ ID NOS: 22

SOFTWARE: Patentin version 3.0

SEQ ID NO 9

LENGTH: 37

Type: Num
; FEATURE:
; OTHER INFORMATION: primer sequence US-08-864-357F-10
                                                                                                                                                        GENERAL INFORMATION:
APPLICANT: Claragen, Inc. & NIH
ITILE OF INVENTION: Use of Recombinant Human Uteroglobin in Treatment of Inflammator
ITILE OF INVENTION: Fibrotic Conditions
FILE REFERENCE: 116142/2
